Preface

This checklist has its origins in the late 1980s. It grew out of our mutual interest in improving access to what we assumed to be an extensive but unknown number of maps of Africa in the University of Illinois Library. As a "list of items giving brief information sufficient only for identification,"[1] this checklist is the result of our joint efforts. Originally we only planned to include maps in atlases and in loose sheet form. Had we stuck to this goal, this list would be much shorter and have taken far less time to produce. However, as our scholarly research began to focus on linkages between mapmaking, imperialism, and colonialism, we decided to expand the list to include maps published in nineteenth-century European geographical journals. The maps in these journals are commonly associated with a written text (e.g., scholarly article, travel account, progress report) that reveals much about the institutional and ideological contexts of mapmaking. They are, in short, important sources for historians of cartography interested in the social and political circumstances in which maps are made. Together, journal and atlas maps form an important part of the cartographic archive of Africa.

An additional reason for combining journal and atlas maps in the same checklist is that some of the basic characteristics of nineteenth century atlas maps such as location, regional focus, and place names were partly influenced by maps first published in geographical journals.[2] Atlas publishers had a commercial stake in updating their maps "according to the best authorities" (Bassett and Porter 1991). The large scale maps of explorers were widely used for this purpose. For example, the route surveys of explorers produced new knowledge of the location, direction, and distance of African settlements and physical geographic features. This information was subsequently reproduced in atlas maps, especially at the regional scale (e.g., West Africa). As a result, the blank spaces so common on eighteenth and nineteenth century maps of the continent became gradually filled in. One of this checklist's greatest strengths lies in its extensive coverage of nineteenth century journal and atlas maps—a period that has been relatively understudied by historians of cartography.

Many individuals and institutions have lent a helping hand in the construction of this checklist. We first wish to acknowledge the Robert B. Downs Fund for funding much of the research and publication costs of this project. Its support has been critical in all phases of this undertaking. Compiling the checklist would not have been possible without grants provided by the Research and Publication Committee of the University of Illinois Library, the College of Liberal Arts and Sciences, and the Research Board of the University of Illinois, Urbana-Champaign. Special thanks to John Bennett, David Cobb, Bob Karrow, Donald Krummel, and David Woodward for their guidance at various stages, to Carol Spindel

for keeping the prose to the point, to the late Albert Scheven for his proverbs and proof reading, to the staff of the University of Illinois Rare Book Room for their prompt service and cooperation, and to our diligent and conscientious research assistants: Maarten deWitte, Susan Holderread, Melissa Savage, and Joseph Otieno. Our deepest thanks go to Jamie McGowan, our longest serving and most versatile research assistant, whose database management skills and keen editorial eye have been critical to this checklist's publication. Their collective contribution underscores the truth of the Swahili proverb, *Mkono mmoja haubebi mtoto*, "One hand alone cannot carry a baby."

Introduction

Early maps of Africa are a rich but largely untapped resource for scholarly research. Although some progress has been made on the history of European mapping of the continent (McGrath 1976; Stone 1995), much remains to be written on the production and use of maps by both African and non-African mapmakers (Bassett 1998; Ngo 1998; Norwich 1997; Stone 1994). Cartobibliographies, checklists and other standard reference works are a prerequisite to further research in this area. However, with the exception of McIlwane's important resource guide, little has been done in this basic reference area (McIlwane 1997). This checklist of the Africa map holdings at the University of Illinois, Urbana-Champaign (UIUC) Library seeks to make a modest contribution towards filling this cartobibliographic gap. It contains some 2400 references to maps of Africa dating from the early sixteenth century to the end of the nineteenth century. If this work facilitates further research on the history of the cartography of Africa, its authors' primary objective will be fulfilled.

The University of Illinois, Urbana-Champaign Library is the third largest academic library in the United States. It also houses one of the country's best Africana collections. We began this project with the goal of assessing the depth and breadth of the library's pre-1900 cartographic holdings on Africa with a view towards making this special collection more accessible to scholars. We first consulted a number of catalogues and collectors' guides to early maps of the continent to check against the university's holdings. Reference works consulted included Yusuf Kamal's thirteen volume *Monumenta Cartographica Africae et Aegypti*, Oscar Norwich's *Maps of Africa*, and R.V. Tooley's *Collectors' Guide to Maps of the African Continent and Southern Africa*. The hundreds of mapmakers and publishers referenced in these three volumes were systematically cross-checked against the authorities listed in the university's card and on-line catalogues. In the course of our search, we discovered many cartographers and atlases not listed in these guides. This was particularly true for the nineteenth century. Africanists and historians of cartography are drawn to this century because the map of the continent changed so rapidly in the wake of European explorations, conquests, and colonization. Many of these maps inform us of the process of empire building and about the role of maps and mapmakers in furthering European expansion (Bassett 1994; Edney 1997; Harley 1988).

Maps of Africa to 1900 is designed to provide scholars and other map users with sufficient information to locate and examine maps of Africa in the UIUC Library. It may also be useful to map librarians who wish to compare their collections or references with the university's holdings. The cartobibliographical information contained in both the map entry and the bibliography of atlases at the end of the volume should be particularly helpful for cross-referencing. The checklist can also be used by individuals searching for pre-twentieth century maps of other

world regions because most of the atlases contain maps of Europe, Asia, and the Americas. Thus the audience of *Maps of Africa to 1900* should be much larger than one might expect given the title of this work.

The focus of this list on original maps of Africa in pre-twentieth century atlases and selected geographical journals both distinguishes itself and complements the multi-volume guide to maps in books and periodicals published by the American Geographical Society (AGS 1968–). The AGS's *Index to Maps and Periodicals* lists maps found in some seventy-five geographical journals. It covers the years 1900 to 1968 with supplements for later years. *Maps of Africa to 1900* complements the *Index* by listing maps from the leading 19th-century geographical journals of Europe such as the *Journal of the Royal Geographical Society*, including its *Proceedings* and *Supplementary Papers*, the *Bulletin de la Société de Géographie de Paris*, and *Petermanns Geographische Mittheilungen*. The maps in these journals are significant because of their contribution to European geographical knowledge of Africa in the nineteenth century. The geographical societies closely followed the progress of European explorers and regularly published their travel narratives in the pages of their journals.[1] The maps that issued from these explorations were highly esteemed by atlas publishers who updated their maps on the basis of this new knowledge. They were also of utility to colonial armies and ministers involved in creating a new political geography in Africa.

Readers should also note that this list excludes facsimiles and maps of Africa published in government documents. With the exception of a few geography books (e.g., Münster, Ogilby), we have focused exclusively on maps in atlases and the most important European geographical journals. Moreover, if the Library has more than one edition of an atlas, we list only those maps appearing in the earliest edition. However, the dates of later editions of the "same" map in the UIUC Library are noted in the Bibliography following each reference. Users of this list should examine these subsequent editions to check for changing map content, scales, and coverage. These later editions often contain new maps that do not appear in earlier editions. If there are new maps in these later editions, they are not recorded in this list.

The University of Illinois Africa Map Collection

What is the scope of the University of Illinois's collection of early maps of Africa? Figure 1 shows the distribution by decade of the maps included in this checklist. From a purely quantitative perspective, the holdings for this part of the collection are strongest for the nineteenth century: of the 2416 maps listed, 78 percent date from this century. Maps are most abundant for the last three decades of the nineteenth century when 59 percent of this list's maps were published. About a quarter (22 percent) of the collection dates from the sixteenth through the eighteenth centuries: 2 percent (49 maps) from the sixteenth century, 9 percent (211 maps) from the seventeenth, and 13 percent (303 maps) from the eighteenth century. Virtually all of the sixteenth-eighteenth century maps are published in atlases (92 percent) or in loose sheet form (7 percent).

Table 1 presents summary information on the total number of maps in the checklist. It shows that 41 percent of the maps are found in atlases or are in loose sheet form. More than half are journal maps. The North (23 percent) and Eastern (23 percent) regions are the focus of almost half of the collection. Maps of the entire continent comprise 19 percent of the list. Maps of Southern (10 percent), Central (12 percent), and West (12 percent) Africa are relatively equal in number but vary according to source.

Table 1. Maps of Africa to 1900: Summary Information

What are the national origins of the maps recorded in this checklist? To answer this question, we noted the date and place of publication of all the atlas maps. Figure 2 shows the importance of certain countries[2] in either the world of publishing (e.g., Italy in the sixteenth century) or the world economy. While the Dutch were powerful actors in both the cartographic and economic worlds of the seventeenth century, the British and French dominated the eighteenth century. For the nineteenth century, more than a third of the atlas maps were published in the United States of America—reflecting both the rise of the USA in the world economy and the geographic location of the UIUC collection.

The checklist also shows a clear relationship between the regional focus of journal maps and the colonial interests of the country in which the journal was published. This pattern becomes

apparent when we examine maps published in three major European geographical journals: the *Journal of the Royal Geographical Society* (United Kingdom), *the Bulletin de la Société de Géographie de Paris* (France), and *Petermanns Geographische Mittheilungen* (Germany). More than half (55 percent) of all the journal maps in this checklist derive from these three journals. Nearly 60 percent of these selected maps were published in the last two decades of the nineteenth century (Figure 3) when France, England, and Germany were aggressively establishing African colonies. Figure 4 shows the strong regional interests of these colonizing powers. The large number of British and German maps of Eastern and Southern Africa corresponds with the geography of European colonization in the late nineteenth century (Figure 5). French journal maps similarly show a correlation between regional concentration and colonial interests in northern, central, and western Africa.

Resources on the History of Cartography

Some checklist users may wish to conduct further research on the social, political, or scientific dimensions of maps and mapmaking. The scholarly literature on the history of cartography is not only voluminous but it is also multilingual, multidisciplinary, and speaks to multiple audiences. An excellent guide to maps and mapmaking of Africa is John McIlwaine's *Maps and Mapping of Africa: A Resource Guide* (McIlwaine 1997). It provides a wealth of references to bibliographies and individual writings on maps, surveying, travel and exploration, place

names, and map collections from the ancient Greeks to the mid-1990s. A more general but equally useful guide to contemporary scholarship on the history of cartography is the serial publication, *Who's Who in the History of Cartography: The international guide to the subject* (Lowenthal 1995). It lists the research interests and publications of individual scholars and gives references to the major historiographies, bibliographies, journals, and on-line resources on the history of cartography. Information is also provided on research centers, professional organizations, conferences, newsletters, and fellowships, and, not least, on the major map collections. In sum, one could not find a better orientation to current resources and research interests on the history of cartography than these two resource guides.

The single most authoritative work that captures the scholarly breadth of the field is the multivolume *The History of Cartography* edited by David Woodward and J. Brian Harley. Its focus on non-western as well as western mapping traditions, its exhaustive bibliographies and excellent illustrations make it a unique contribution to the field. Chapters on the history of non-western mapping of Africa appear in Books 1, 2 and 3 of the second volume of *The History*.

Jeffrey Stone provides a succinct and well-illustrated history of European maps of Africa in the second edition of *Norwich's Maps of Africa* (Norwich 1997). His discussion of the dominance of European cartographic traditions on the early evolution of maps of Africa underscores the importance of certain cartographers like Joan Blaeu and Jean Baptiste Bourguignon d'Anville. A more detailed but non-illustrated history of African maps is found in Stone's *A Short History of the Cartography of Africa* (Stone 1995). This latter work is particularly insightful on the evolution of colonial mapping in southern and eastern Africa.

Postmodernist approaches have brought a social theoretical vigor to the field that is best captured in the work of Harley (1988, 1989), Belyea (1992), Edney (1997), Godlewska (1994), and Wood (1992). Interesting debates around theoretical positions and interpretive approaches in the history of cartography regularly take place in the Canadian journal *Cartographica*. Monmonier (1991, 1995) has authored two valuable books focused around the theme of "cartographic manipulation." His *How to Lie with Maps* is an excellent introduction to the elements of a map (scale, projection, symbols) and how maps work. The central point of these works and one that the users of this checklist might keep in mind is that "a single map is but one of an indefinitely large number of maps that might be produced for the same situation or from the same data" (Monmonier 1991, 2). Denis Wood makes a similar point when he writes that "maps, all maps, inevitably, unavoidably, necessarily embody their authors' prejudices, biases and partialities..." (Wood 1992, 24). The Africa map collection of the University of Illinois provides abundant evidence of such partialities and prejudices in mapmaking. We hope this checklist will serve as a useful guide for those interested in exploring these and other themes in the history of cartography.

Notes

[1] Petermann's *Mittheilungen*, "the most important German-language geographic periodical" of its day, was not associated with any particular scientific geographical society (Scharfe 1997, 217).

[2] The classification is based on the place of publication and the country in which that city is located in the late-twentieth century.

Organization of Checklist

The checklist organizes the maps geographically following the regional classification used by the Library of Congress (LC) (Figure 6). When the area included in a map extends over more than one LC region, it is listed in the region that encompasses most of the map area. If a map's area falls within three or more areas delimited in the LC classification, then it is placed in the continent section. For example, maps focused on the Sahara Desert or Nile or Zambezi Rivers will be found in the continent section. Users are advised to check maps in more than one region if their area of interest straddles LC regions. At the beginning of each geographical division, a "See also" section identifies maps in other regions that may be of interest due to overlapping areas.

Maps are listed chronologically within each geographical division by date and alphabetically by authority. The parts of each annotated entry are explained below and illustrated in Figure 7.

Map Number. At the top left hand corner of each entry is a number in a black box that identifies each map in the checklist. This number is also used to refer to specific maps in the three indexes.

Date. The date refers to the year the map was printed. This date may differ from the year the atlas was actually published. The latter date is noted in the Bibliography. If no year of publication is indicated on the map itself, the atlas or journal publication date is recorded.

Authority. The name of the mapmaker or publisher responsible for producing the map is noted on the next line. When the authority is not known, the entry begins with the map title. We have used the UIUC Library catalogue to establish the authority. For example, UIUC lists Claudius Ptolemaeus (Ptolemy) as the authority of certain atlases that would be listed under the editor's name (e.g., Martin Waldesmüller) in other resource guides (e.g., Tooley 1969, 121). An alphabetical list of authorities is indexed at the end of this book.

Title. The title appearing on the map itself is printed in bold face. If the title is exceptionally long, it is shortened with the omission indicated by an ellipsis. If no title appears on the map, one is constructed based on the region covered and placed within brackets. To facilitate the identification of maps, we have included an index of map titles.

Scale. With few exceptions, early maps do not contain scales in the conventional ratio form used today (e.g., 1:1,000,000 or 1/1,000,000). Consequently, scales were estimated where possible using the "Map Scale Indicator" developed by the Cartographic Laboratory of Memorial University of Newfoundland, Canada. We used lines of latitude to arrive at an approximate scale. If a map lacks parallels, then "no scale" is recorded.

Map dimensions. These are given in centimeters measured from the outside borders of the map. Vertical dimensions are given first. In cases where there are more than four sides to the map border (e.g., Ptolemy's hexagonal shaped maps), the measure of widest horizontal distance is given.

Source. For loose sheets, the University of Illinois call number and location are given. If the map is part of an atlas, a short title of the atlas in which the map appears is provided, followed by the volume and plate number of the map. Some atlases contain neither page nor plate numbers. In such cases, the user must search the atlas for the map. The last line contains the call number and location of the atlas. The full names of the abbreviated locations are noted in the introduction to the Bibliography.

Comments. Some maps have an unusual orientation or contain inset maps. These special features are mentioned in the lines following the call number. Place names and inset map titles are given in English where possible but are not word-for-word translations. Readers should beware that some of the place names represented in these inset maps no longer exist or have changed. When we are not certain about the location of a particular place, we provide the title of the inset map in the original language. An index of inset maps is located at the end of this volume. It contains references to more than 300 inset maps.

Bibliography of Atlases

This bibliography identifies the atlases referred to in the map entries. All are in the Library of the University of Illinois at Urbana-Champaign (UIUC).

Each entry consists of bibliographical information followed by the UIUC Library call number and location within the Library. We have listed maps in the earliest edition found in the library. Occasionally we list maps in later editions of especially important atlases, such as Mercator and Ptolemaeus. Finally, we note any other editions of the atlas up to 1900 found in the UIUC library records.

Information for each atlas:

Author. The names are recorded according to the library's catalog (card form and online). Authors are sometimes publishers.

Title. In italics. We have abbreviated titles of some of the older atlases (indicated by ellipsis dots), but have retained enough information to identify the particular edition.

Edition. Noted if other than the first.

Place of Publication. For the older atlases (most up to the eighteenth century), we indicate the place name as it appears on the title page, which is often in Latin. For more recent ones, the place name is anglicized according to library usage.

Publisher. When not known, "n.p." is used.

Date. Multi-volume atlases usually span several years of publication, thus dates may be "1740-1762."

Number of volumes. Noted if more than one.

Call Number. The call number is given without spaces, conforming to the UIUC online catalog. "Uncat" signifies the atlas is not catalogued, although available.

Locations are separated from the call number by a slash, and are abbreviated thus:

clx	Classics library
ihx	Illinois Historical Survey
max, mar	Map and Geography library
rbx, rbc, rbs	Rare Book Room
stx	Stacks

Brackets indicate that information was obtained from another part of the book than the title page. For the few atlases not yet catalogued in the UIUC library, brackets encase all the bibliographical information; such information was obtained from the *National Union Catalog of Pre-1956 Imprints.*

Maps of Africa to 1900 is an invaluable reference work for scholars, map librarians, curators, and others interested in the cartographic record of Africa. This checklist of more than 2,400 maps is compiled from atlases and geographical journals held in the collections of the University of Illinois at Urbana-Champaign. The maps listed date from the early sixteenth century to the end of the nineteenth century. One of the checklist's greatest strengths is its coverage of the nineteenth century. More than three-quarters of the maps listed date from this period.

The clarity of each annotated entry makes this resource very easy to use. Indexes of map authorities, titles, and inset maps greatly facilitate map identification. A comprehensive introduction provides summary information on the total number of maps by date, region, and country of origin. The data show a strong relationship between the regional focus of journal maps and the colonial interests of the country in which the map was published. The checklist's bibliography of atlases and journals is an important addition to the cartobibliography of Africa. *Maps of Africa to 1900* charts an original and clearly marked course to the cartographic archive of Africa.

Thomas J. Bassett is Associate Professor of Geography at the University of Illinois at Urbana-Champaign. His writings on the history of cartography of Africa focus on both European and African map making traditions.

Yvette Scheven is Professor Emerita of Library Administration and former Bibliographer for African Studies at the University of Illinois at Urbana-Champaign. She has published several bibliographies in the area of African Studies.
